

In case of Leakage...

In case of leakage stop all operations, close all isolation valves - shout & raise alarm/siren.

In case of valve leakage from cylinder, put safety cap and take the cylinder in open space.

In case of body leakage, take the cylinder in open area & vent under controlled conditions.

Call Fire Brigade, *SUPER* Gas if leakage is not controlled.

Use D.C.P type fire extinguishers in case of fire and / or call Fire Brigade.
